Profile

Product Designer with over 4 years' experience designing accessible, safety-critical digital products for mobile and web. Strong background in end-to-end UX, user research, design systems and cross-functional collaboration with product managers and engineers. Proven ability to validate designs with the people who rely on them, including the Deaf community, and to take products from discovery to a real-world pilot, turning research and analytics into simpler, more usable experiences with WCAG built in from the first sketch, and AI built into how I work, from research synthesis to prototyping in Claude Code and Figma Make.

Experience

UX/UI Designer, Inclutech

May 2023 – Aug 2026

Full time · Belfast

- Established the end-to-end design process across multiple mobile and web products, as one of a two-person design team, from discovery, journey mapping and competitor analysis through to high-fidelity prototypes and developer handoff.
- Planned and ran usability testing with a range of participants, including members of the Deaf community working alongside interpreters, using the findings to drive multiple rounds of iteration.
- Integrated AI across the design workflow using Claude Code, Figma Make and Figma agents, writing project-specific prompts to speed up ideation and UI exploration while keeping output aligned with design-system components, patterns and accessibility standards.
- Used AI to synthesise research notes into themes for affinity mapping, draft UX copy and microcopy, and run first-pass accessibility and design-system checks.
- Designed two-sided experiences spanning public-facing mobile apps and staff web dashboards, mapping how information flows between users and responders so requests arrive clear and actionable.
- Analysed a real-world product pilot in Datadog, using funnels, session replays and error data alongside post-pilot questionnaires to pinpoint where users dropped off in core flows, then turned the findings into design recommendations for the next release.
- Defined design system foundations (tokens, type scale, spacing and core components) so products stayed consistent, accessible and ready to scale.
- Built accessibility in from the start, checking contrast, type, touch targets and navigation against WCAG 2.2 AA (using Stark) rather than treating it as a final check.

UX/UI Designer (placement), The Essence Vault

Dec 2021 – Sep 2022

Placement · Randalstown, Co. Antrim

- Designed end-to-end experiences for e-commerce and marketing platforms, from wireframes and user flows to prototypes and high-fidelity UI in Figma.
- Conducted user research and competitor analysis to inform design decisions and improve key user journeys.

Skills and tools

Product design	End-to-end UX and UI, interaction design, information architecture, user flows, prototyping, design systems
Research	User research, usability testing, journey and affinity mapping, competitor analysis, workshops, product analytics
Accessibility	WCAG 2.2 AA, inclusive design, testing with people with access needs
Collaboration	Agile delivery, sprint planning, design reviews, developer handoff, cross-functional teamwork
Tools	Figma, Figma Make, Figma agents, Claude, Claude Code, Datadog, Miro, Jira, Stark, VS Code, HTML/CSS

Education

BDes (Hons) Interaction Design (2:1), Ulster University 2020 – 2023

Pearson BTEC Level 5 HND in Graphic Design, Belfast Metropolitan College 2017 – 2019
